

panorama window

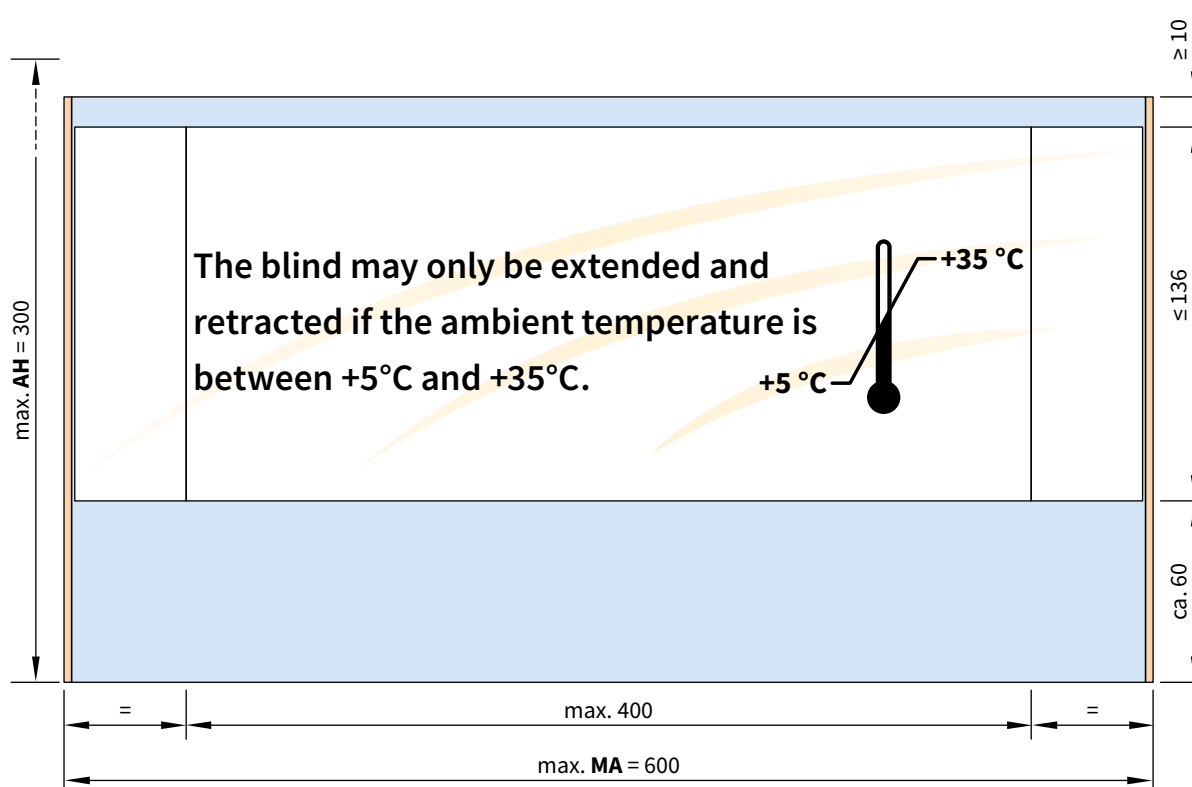

markilux panorama window 776 tracfix / 876 tracfix

The flexible window providing an unobstructed view.

flexible panorama window for markilux 776 tracfix and markilux 876 tracfix

- maximum blind size:
fixture width 600 cm × unit height 300 cm
- continuous panorama window
maximum height 136 cm
- fabric strip above and below the window foil:
sunvas or sunsilk
- the fabric strips are always seamless: With striped
patterns the stripes run horizontally, therefore plain
patterns are recommended
- only available with tracfix

Dimension overview panorama window

AH = unit height

MA = blind fixture width

The different properties of polyester fabrics and those of the window foil may, depending on the temperature and conditions, lead to the formation of wrinkles, fraying, curved lines where the materials meet and to squeaking. The foil may also become electrostatically charged.

Scuff marks and scratches in the panorama window itself may become evident.

Moisture on the foil can lead to a change in the chemical properties of the plasticising agent, which may lead to the foil becoming cloudy. Hot conditions and rolling the material up when damp may exacerbate this effect. Consequently it is to be recommended that any moisture on the foil be allowed to evaporate before the blind is retracted. However, because of

wide variations in climate conditions, no guarantees can be given in this regard.

The bottom limit of the blind may alter slightly as the window foil slowly stretches and may have to be reset at a later date. For cleaning and care, the regular use of a suitable rinse and smear-free film cleaning agent is recommended:

Christalplus – Apco – cleaner

0.75 litre bottle
